Summary

I'm a front-end developer specializing in converting PSDs to responsive websites. I'm experienced with CSS frameworks as well as being able to code your project using HTML/CSS/JS. I am always continuing to learn more about web development and I am currently learning React, I look forward to using this in my next project.

Technical Skills

Front-end	HTML5, CSS3, SASS/SCSS, JavaScript, jQuery
Frameworks	Bootstrap, Bulma, Foundation (web and email)
UI/UX	Adobe XD, Photoshop
Source Control	Git, GitHub
Email Tools	Litmus, MailChimp, Hubspot

Projects

Nauto Landing Page - View Site | View Code
Nauto is a fleet safety management and tracking system for AI vehicles. This is a landing page for their eBook offering more info on how to improve safety. This webpage is fully responsive and built using the Bulma framework.

Pour Wine & Taproom - View Website | View Code
Pour is a local pub in Mesa, AZ. I built this website for them using Bootstrap 4 and used Netlify for hosting. I focused on keeping this website simple, responsive and made the important info easy to find. I integrated Untappd, an app that lets customers know which beers are on tap, into the beer menu. I also set up Tockify on the events page to allow the owners to easily update their website.

Greer Lodge AZ - View Site | View Code
This is a promotional email for Greer Lodge in Arizona. This is a hand-coded HTML email, fully responsive and tested using Litmus.
